

**Amendments to the Specification:**

Please replace paragraph [0059] with the following amended paragraph:

**[0059]** The vehicle history information system 12 in accordance with the illustrated embodiment of Figure 2 further includes price adjustment database [[38]] 28 adapted to store calculated price adjustment values for vehicle history attributes, examples of vehicle history attributes being listed in Figure 3 as previously noted. The price adjustment values are each indicative of a specific vehicle history attribute's impact or effect on the value of the particular used vehicle. For example, if a particular vehicle has been in a major accident or has a salvage title, such vehicle history attributes can be expected to lower the value of the particular used vehicle by a certain amount. By providing price adjustment values that correspond to the vehicle history attributes, the value of the particular used vehicle may be accurately adjusted to reflect such vehicle history attributes, such attributes being provided by the vehicle history database 30. The price adjustment values may be expressed in any appropriate manner such as a fixed amount, a percent of the value of the vehicle, or using another mathematical formula or model. As will be explained in further detail below, such price adjustment values are calculated using the available vehicle history data from the vehicle history database 30 and the transaction records from the transaction database 32.
